3) BURNT DOWN CHART

Reflection Questions – Dropshipping Inventory & Order Orchestrator (DIOO)

1. Did your estimations reflect the actual effort?

Yes. The story-point estimates generally reflected the actual effort required for the Dropshipping Inventory & Order Orchestrator project. Simpler tasks such as **Validate Order Information** and **Record Tracking Number** were assigned fewer story points, while more complex tasks such as **Verify Supplier Stock** and **Receive Storefront Orders** were assigned higher story points.

2. Was your backlog well-prioritized?

Yes. The backlog was prioritized according to the order-processing workflow and business importance. **Receive Storefront Orders**, **Validate Order Information**, and **Split Multi-Vendor Orders** were given higher priority because they are essential for processing customer orders. Supplier fulfillment and shipment-tracking activities were planned after the core order-processing tasks.

3. How did your simulated sprint align with your plan?

The simulated sprints aligned well with the plan. **Sprint 1** included five user stories with a total of **26 story points**, covering order processing and supplier fulfillment. The stories were progressed through **To Do** → **In Progress** →

Done. Sprint 2 then covered the remaining three stories with **11 story points**, completing the supplier dispatch and shipment-tracking functionality.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart showed how quickly the team's remaining work decreased during the sprint. In Sprint 2, the remaining work reduced from **11 story points to 0**, indicating that all planned stories were completed. It helped demonstrate the team's progress, completion rate, and ability to finish the planned workload within the sprint.
